4	Timeline	2

1 Introduction

Use this section to set the stage for your project. Provide some fundamental background (enough to understand the context of the problem). Cite some very key literature and previous work. Here's an example of how to cite a paper.

The introduction should introduce the problem and tell me why it is important. It should do so by identifying a research gap or the need for the research.

2 Aims and Research Questions

Define what is the overarching goal of your project. Break down this goal in a series of research questions that you want to answer.

Describe expected outcomes of the research and articulate how they can fill the gap identified earlier.

3 Methodology

Describe the methods that you will use in answering your research question, and provided references when needed.

Identify potential obstacles for the research, and briefly describe how you can circumvent such obstacles. For example, if your research relies on mathematical predictions, a computer simulation could be used if the analytical results are not at reach.

This method briefly outlines how we will investigate our proposed research.

3.1

The UCR Time Series Classification Archive [1].

We will implement the proposed

4 Timeline

Week:	1	2	3	4	5	6	7	8	9	10	11	12
Initial meeting	-	•										
Review of literature	-		•									
Writing proposal	-		•									
Replication of current research	-			•								
Implementation of proposal	-				•	•	•	•	•	•		
Benchmarking models	-					•	•	•	•	•	•	
Project presentation	-											•
Final report	-		•	•	•	•	•	•	•	•	•	•

Table 1: Project schedule by week.
